

Stretchy Slime

TIME: 10 MINUTES 

DIFFICULTY: EASY 

WARNING: NON-EDIBLE 

This is a super-fun recipe to try. This gloopy stuff is the basis for many more awesome slimes later in the book.

YOU WILL NEED

- * 240 ml (8 ½ fl oz) PVA glue
- * 1 tsp bicarbonate of soda
- * finger paint or food colouring of your choice
- * 1 tbs eyewash – it must contain boric acid or sodium borate

Pour the glue and bicarbonate of soda into your bowl. Beat together.

Squirt in some paint and stir well. Keep adding more paint until you get the perfect colour.

Drop in the eyewash and mix together. The slime will begin to get stringy. When it comes away from the edges of the bowl, knead or squish the mixture with your hands.
